

# MULTI-LIN-Q

# MLQ

## MULTI-LIN-Q

**Seamlessly, rapidly and securely connect multiple business locations with Stratus MultiLinQ.** By utilizing architecture that prioritizes traffic based on your needs, your data flow is streamlined between locations via a secure connection that avoids the public internet domain. MultiLinQ provides unsurpassed performance between your locations whether across the street or across the country. Think of it as your very own WAN (Wide Area Network).

## MULTI-LIN-Q INTERNET

**Providing the same service as MultiLinQ, while adding a public internet connection on top, MultiLinQ Internet** allows one connection to carry both private inter-office data between locations as well as your public internet data. Security is handled by our CBFW (Cloud-Based Firewall) where all your data is sorted and prioritized to accommodate your needs.

## MULTI-LIN-Q INTERNET 2-PORT

**MultiLinQ Internet 2-Port** is similar to MultiLinQ Internet, however it is executed over two separate ports rather than a single demarcation point. This allows for the Stratus on-site device to handle your private data connection between sites while giving you a separate port that you will manage with your own firewall solution. Put simply, Stratus will handle the private connection and you will handle the public connection.

Since 1999, companies of all sizes and varying telecom needs have engaged Stratus Networks for internet, data, cloud and voice solutions that deliver speed, reliability and security backed by our team's expertise and support.

**We deliver faster, more reliable internet and communication services with a businesses-only fiber optic network built from the ground up.**
